Cocologi

Charcoal logistics

PT Cocologi Lentera Asia is a registered company in Indonesia. The initial idea was to utilize the abundant coconut and sawdust waste in various regions in Indonesia. Our vision is to connect Indonesia SME Charcoal product to our global end user and become a charcoal supplier which is able to fulfill the market requirements. Our mission is always fast to respond our client needs, choosing the best material to prioritize a competitive products quality, and to keep innovating, fulfilling the charcoal market requirements.

Indonesia is the best coconuts producer in the world and has many types of hardwood that can match international standards. We have almost 10 factories that work together closely with us so the ease of logistic distribution can help us to accelerate the delivery through 3 International Ports, Jakarta, Semarang, and Surabaya. We do understand the needs of the global market and we are committed to providing the best services.

Charcoal

Briquette

Our briquettes are made from coconut shell charcoal, sawdust and hard woods that are burnt down the same way as lump charcoal. Unlike lump charcoal, which is pure wood, additives are in the process of making briquettes. The additives are mainly used to hold the materials together in order to achieve clean little blocks that are often roundish-squarish in shape which makes them easier to stack. They provide a more stable burn, maintaining a steady temperature for a longer period of time with less hand holding than lump charcoal.

Our product is _____

What are Charcoal Briquettes **USED FOR?**

SHISHA / HOOKAH

Shisha charcoal briquette are made from coconut shells charcoal. It is a kind of high-quality charcoal product specially designed and manufactured for hookah users. Cubic shisha charcoal is non-flammable, which needs a gas stove to ignite. Compared with the round shape shisha charcoal, the burning time of cubic hookah charcoal is longer.

BBQ

While there may still be some argument about it, most people in the know agree that food grilled over charcoal tastes better than food grilled over gas. Yes, gas grilling is quicker and more convenient, but when it's the weekend and you have all the time you need, charcoal is truly the way to go.

Heater

Home heating options are numerous, and choosing amongst them can be difficult. Burning charcoal for heat can be an excellent choice if done safely. The highest quality charcoal is a must, sawdust charcoal is available for purchase and can be used in many coal-burning stoves, heaters and boilers.

Coconut Charcoal Briquette (Shisha/Hookah)

We produce coconut charcoal in a modern way with advanced machines and experts in the field of charcoal production. We make the best coconut charcoal briquette from Indonesia, for shisha/hookah we make from 100% pure coconut shell, all of our product is free from any chemical. We bring the material from one of the best coconuts sources on the islands of Sumatra and Sulawesi, Indonesia. We accept orders from OEM/private brands and are willing to customize everything to your taste. We also ensure absolute confidentiality between

PT. Cocologi Lentera Asia

Charcoal Briquette (BBQ)

Our BBQ Briquettes is one of the best you can get. They glow hotter, longer, faster and are made from 100% natural raw materials (100% coconut shel/coconut shell + hardwood/100% hardwood), allowing you to raise the bar. Thanks to their unique shape and size, our briquettes are ready for use in 15-20 minutes and deliver a consistent high heat for up to four hours - making them ideal for perfect steaks and juicy joints.

HARDWOOD CHARCOAL

Also known as "lump charcoal," this is what you get when wood is burned down to an impurity-free coal. No binders, no fillers – just pure, simple, high-quality charcoal.

Diehard grill masters love this stuff, both because of its simplicity and because it has a host of practical advantages. It **lights more quickly**, so you can get your food on the grill faster. It burns hotter, so you can get a deeper sear on your two-inch ribeye. And it produces less ash, so you don't have as much gunk settling at the bottom of your grill.

Material	100% Alaban Hardwood
Origin	Kalimantan (Borneo)
Size	5-10cm
Ash Content	1.1%
Moisture	5-7%
Fix Carbon	74%
Calorie	7650
